Automation makes industrial plants more efficient – and digitalisation opens up even more opportunities. Source: Pixabay

An automatic success

The success of automation is a never-ending story, and the valve industry plays a key role in it. For many years, valves have benefited from the advantages automation brings. Now digitalisation, and increasingly the use of artificial intelligence, is taking this success story even further. True to the motto: The Sky is the Limit!

The demand for smart, connected valves is rising: As intelligent nodes, valves are increasingly embedded in digital networks, capturing and processing sensor data in real time. Even under extreme conditions, automated valves work with precision and reliability. There's no doubt about it: digitalisation is giving automation an enormous boost.

Benefits for the environment and competitiveness

Optimised processes, more efficient use of resources, and lower operating costs – all these advantages are driving the automation success story. It's a

MAKE YOUR BUSINESS FLOW

win-win situation: good for the environment, and good for companies' competitiveness. In short: an automatic success!

But the automation story doesn't stop there: Self-learning systems could soon be optimising production processes in real time. Proof that the potential of automation is truly enormous!

Discover the latest trends and highlights from the valve industry at VALVE WORLD EXPO from 1 to 3 December 2026 in Düsseldorf. Find the latest industry news and product information at www.valveworldexpo.de.
